In French below

In Benin, access to quality education remains a challenge for many children. One in three is currently out of school, while nearly a quarter of children aged 5-14 are engaged in work. In many schools, overcrowding and shortages of educational materials make learning more difficult, especially where teachers have limited expertise and opportunities for professional development. Girls face additional obstacles, with around 400,000 still excluded from education, often because of forced marriage and domestic responsibilities.

Since 2008, WeWorld has been working with schools and communities in Benin to make schooling more accessible and inclusive for every child.

Building on this commitment, in partnership with Akelius Foundation, we launched READI - Resilient Education and Digital Innovation, a three-year programme being implemented in seven countries, including Benin, to make quality education more accessible. The initiative combines innovative and digital educational tools with teacher support, helping improve learning opportunities while strengthening the role of communities in creating supportive environments for learners.

In Benin, access to quality education remains a challenge for many children. Today, one in three children is not enrolled in school, while nearly a quarter of children aged 5 to 14 are working. In many schools, overcrowded classrooms and lack of teaching materials complicate learning, especially when teachers have limited access to continuing education. Girls face additional obstacles: nearly 400,000 of them remain deprived of education, often due to forced marriages or responsibilities within the household.
