### **ngo\_sanasezim**

This time, the Sana Sezim team visited Shymkent city. A. Baitursynov went to school-gymnasium No. 50, where students studied important language topics using the Akelius platform and tablets.

The 5<sup>th</sup>-grade students had a lesson on "Features of fractional numbers in Russian language classes" and explored the similarities and differences in the use of fractional numbers in Russian and English, including their changes in simple sentences and declension.

Our team believes that the Akelius program makes learning accessible and fun, helping children better understand language nuances and develop skills they will need in the future.

We firmly believe that the use of digital technologies makes the educational process modern and efficient.
