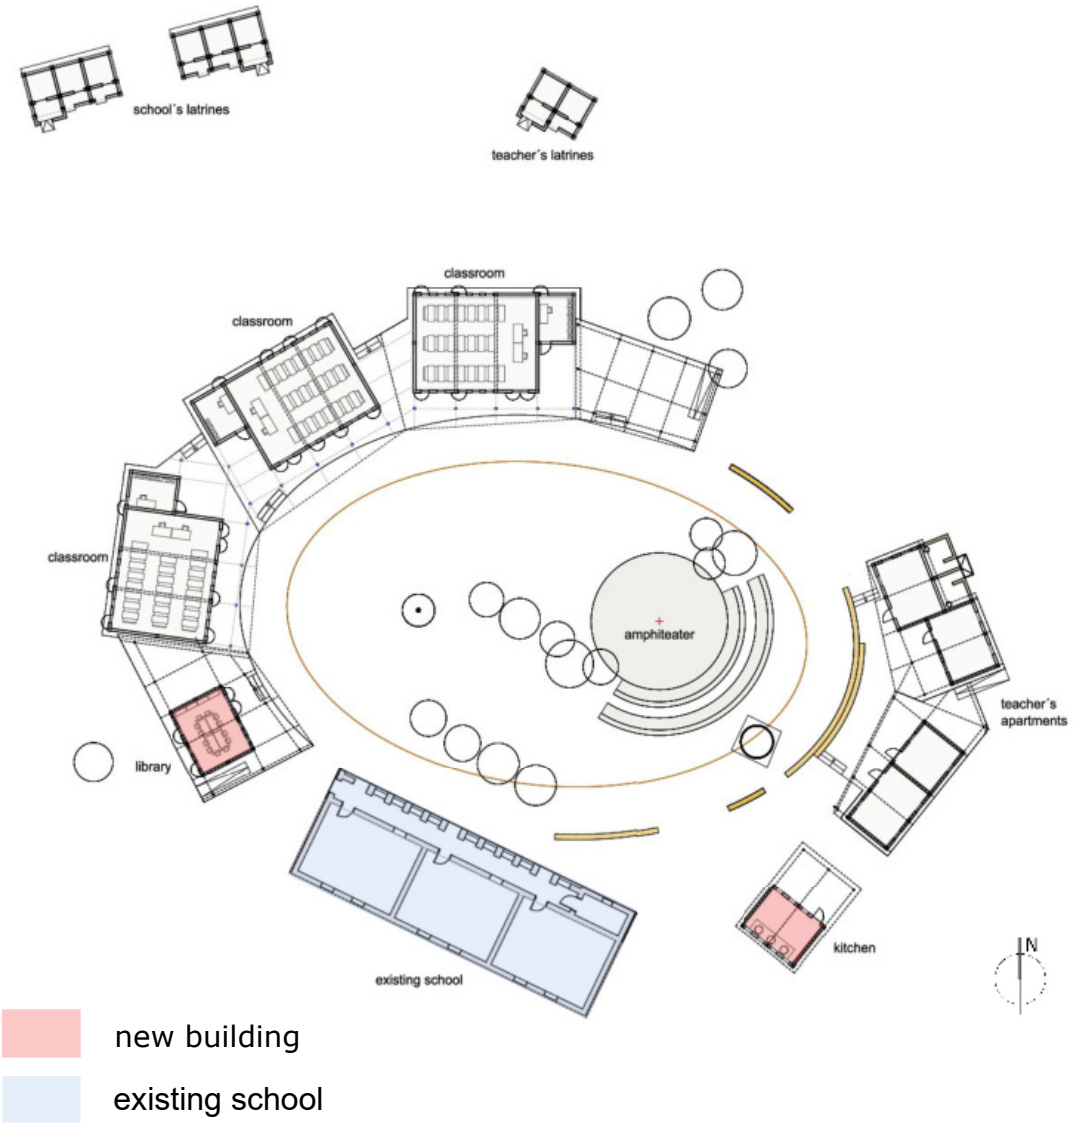
Akelius - MenoMali Schools project, 2025-2033

N'Tjiblembougou, September 2026

N'Tjiblembougou Elementary School, floor plan



The new school project includes the construction of two additional buildings

- one library of 20 m²
- one kitchen of 18 m² for the teachers' apartments

The project also provides for

- expansion of the existing terraces
- construction of a new reinforced-concrete roof with a detached single-pitched metal covering
- maintenance work on the walls of the existing school building and the installation of a new metal roof

The school complex is surrounded by lush vegetation.
This is a precious resource in the semidesert region where the village of N'tjiblembougou is located.
The amphitheater has been reduced in size in order to preserve the existing trees.

Completion of the wall

Teacher´s apartments

Kitchen

Library

A large quantity of earth and aggregates is spread and compacted on the floor of the buildings to form the base layer of the floor.

Latrine pits completed

Construction of the walls

Construction of the roof

The construction materials for the roof arrive at the site

The inhabitants of the village of N’tjiblembougou do not know what cement is. During the final stage of the roof construction, a crowd of young people gathers to watch the concrete being poured
